Packages

Question 1

```
install.packages("aRtsy")
```

Install packages only installs the package to R but library activates the package once already installed.

Question 2

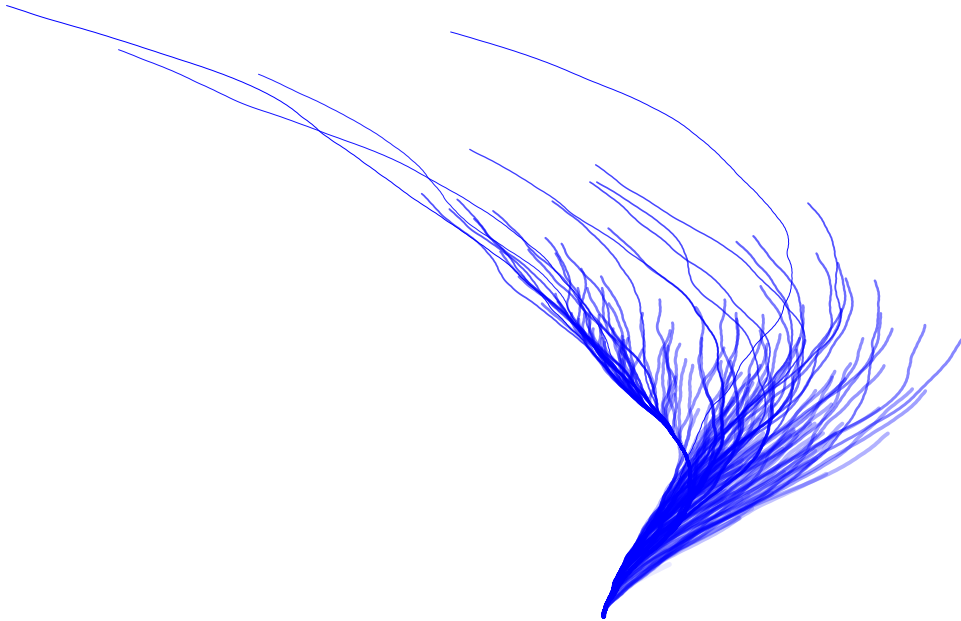

```
library(aRtsy)
```

$$a_{n+1} = \begin{cases} a_n/2 & \text{if } a_n \equiv 0 \pmod{2} \\ 3a_n + 1 & \text{if } a_n \equiv 1 \pmod{2} \end{cases}$$

Question 3

a.

```
canvas_collatz(  
  colors = c("blue"),  
  set.seed(30)  
)
```

It displayed an image. The image had blue lines that look randomly drawn. ##### b.

n seems to be the number of lines that the code generates

This might be tricky for a file because every time it refreshes the file will have to change as well.

set.seed will lock in place the RNG status. The picture comes out the same everytime.

Question 4
